

A vibrant photograph of pink roses in full bloom, set against a bright blue sky with scattered white clouds. The roses are the central focus, with several large, multi-petaled flowers in sharp focus. The background is softly blurred, showing more green foliage and distant flowers. The overall mood is bright and cheerful.

Bulgaria for ITU Council 2027-2030 (Region C)

We reaffirm our commitment to the global digital and social inclusion, universal meaningful digital connectivity as one of the central levers to sustainable development, and economic opportunity.

The digital divide still exists on a global scale, but its nature is constantly changing with the development of new technologies.

Bulgaria considers a digital transformation rooted in human-centric and human rights-based approach as key to progressing towards and achieving the Sustainable Development Goals and bridging the digital divide.

Our priorities as a Council member:

- Focus on building a fit for the future organization – open, innovative and flexible, based on results and financial stability.
- Fostering the constructive dialogue among Member States and encourage shared progress founded on mutual respect, understanding and a common vision for a more connected and inclusive world.
- Contributing to a work in the spirit of cooperation, transparency and inclusivity.
- Support for transforming ITU into a modern and efficient organization that plays a leading role within the United Nations system.
- Adoption of mechanisms to enhance transparency, accountability, and efficiency in the use of the Union's resources.
- Ensuring alignment between strategic and financial plans, particularly through the implementation of a results-based management approach.

Bulgaria is a member of the International Telecommunication Union since 1880, when the country joined its predecessor, the International Telegraph Union.

The Republic of Bulgaria consistently supports ITU's mission to foster the cooperation, promote equitable access to information and communication technologies, and advance global connectivity for sustainable development.
