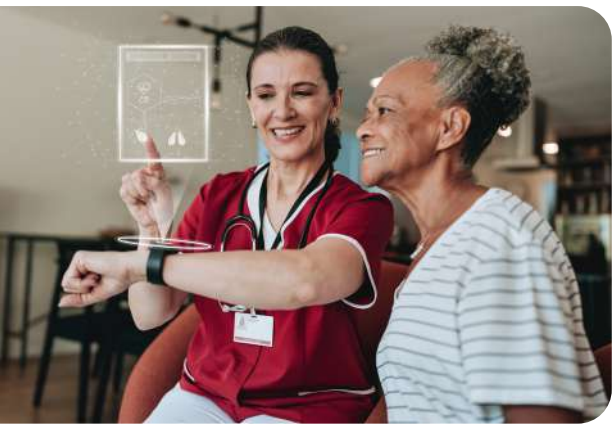
BRAZIL 4 ITU COUNCIL

Brazil has occupied a seat in the ITU Council for many cycles, aiming to be instrumental for its region (Americas) and the whole ITU Membership's interests. Some of the Brazilian traditional goals are the improvement of ITU Council governance, managerial efficiency, budgetary transparency, a clear prioritization in the Union resources allocation, and a geographically equitable staff.



As a way to deepen the country's support for ITU, during the last Plenipotentiary Conference (PP-22), Brazil more than tripled its financial contribution from CHF 954,000 to CHF 3.5 million each year, achieving a place among the Union's top contributors.

During the 2023-2026 cycle, Brazil has also been acting in the Council for stronger ITU technical deliverables in the fields of cybersecurity, Artificial Intelligence related to ICTs, and space connectivity, among other aims, to meet the needs of all nations.

Brazilian delegations have been present and actively taking part in all the Council Sessions and Council Working (WG) and Expert Groups (EG). Brazilian nationals are serving as Chair of the Member States Advisory Group on the HQ premises project (MSAG), Vice Chairs in the Financial and Human Resources and WSIS&SDGs Working Groups, and Facilitator for Space Connectivity in the WTPF26 EG.

For the cycle 2027-2030, Brazil commits again to keep pursuing its above-mentioned goals and helping the Council build consensus in all the matters under its mandate. The country believes in permanent and inclusive dialogue bringing together not only the Member States but all the Membership to shape greater outcomes.
