

POLAND TO ITU COUNCIL

2023 - 2026

WHAT DID WE ACHIEVE

Poland joined the ITU in 1921 and has been a reliable member of the ITU Council since 2010.

- During the last three terms in the ITU Council, Poland hosted many high-level gatherings and summits, such as the Global Symposium for Regulators and - recently - IGF 2021.
- Moreover, Poland organised regional conferences and international events for telecommunication and ICT organisations and institutions, e.g. the Regional Development Forum for Europe, the ITU Region C Meeting, ITU Regional Forum for Europe: 5G Strategies, Policies and Implementation, Broadband Competence Office etc.
- Poland is an active contributing partner of the WSIS Process and shares its know-how regarding the digital approach to industry, market, education, e-health, and e-administration.
- Poland contributes to the discussion on electromagnetic fields (EMFs), the combating of fake news in this area, and on the roll-out of 5G. Our annual “International conference on 5G, EMF and human health” is the only event of this kind in Europe. Poland has also contributed to the ITU framework in the area of the mapping of infrastructure and the development of broadband networks, citizen-friendly e-administration, and digital education.

WHAT WE WANT TO DO

- Poland actively contributes to the achievement of the Sustainable Development Goals (SDGs) and the implementation of Regional Initiatives adopted at the World Telecommunication Development Conference.
- Being a member of the ITU for over 100 years, Poland is committed to building a fully inclusive global information society. It is reflected in its contributions to ITU global and regional initiatives aimed at improving digital standards in developing and developed countries.
- Poland intends to continue supporting the ITU in its activities and hopes that the union will keep developing effective policies and global standards and carrying out various actions in the field of telecommunications and ICTs.
- Poland will support the promotion of the ITU at the regional and global level as an agency focused on telecommunication standards and radiocommunications, as well as providing support to developing countries.
- Poland intends to participate in the majority of ITU activities that are critical for the establishment of global standards necessary to achieve our common global goals.

POLAND TO ITU COUNCIL 2023- 2026
